

Ecosystem and Biodiversity Policy

As Çolakoğlu Metalurji, we consider it our fundamental responsibility to minimize the environmental impacts of our operations and to preserve the balance of ecosystems. Under the guidance of our “Future-Ready Steel” sustainability strategy, we aim to set targets for the protection and improvement of biodiversity and to implement the adopted principles in collaboration with our various stakeholder groups.

We adopt the following principles based on this purpose:

- Taking ecosystem integrity as the basis in the planning and execution of our activities,
- Supporting efforts to protect biodiversity through cooperation and joint projects,
- Accepting responsible production practices as one of our fundamental principles,
- Prioritizing the sustainable management of natural resources in our production processes,
- Developing innovative solutions to increase efficiency in energy and material use,
- Promoting the sustainable use of biological resources in our production processes and supply chain,
- Acting in accordance with national environmental regulations and international environmental agreements,
- Sharing information through internal communication channels to raise awareness among our employees on the importance of biodiversity.
